

loadpoint

load cell fault detection board

Overview

Loadpoint – The Load Cell Fault Detection Board is designed to be used for a quick diagnostics of weighing equipment failure.

In the event of a failure, a digital weigh indicator will either display erroneous weight or a series of characters such as lines etc. It will not provide information as to where or what has failed, necessitating time consuming troubleshooting.

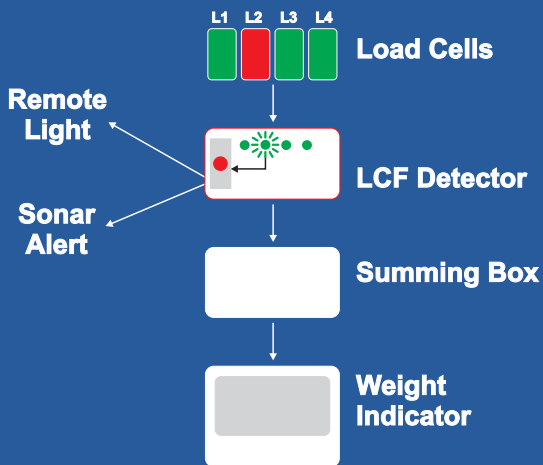

The **Loadpoint** eliminates this problem.

Armed with **Loadpoint** information, the technician can carry out the repair in a timely and cost effective fashion, reducing on-site time or eliminating extra trips to source parts.

Benefits

- Quick diagnostics of weighing equipment failure
- Eliminates time consuming troubleshooting
- Reduces on-site technician time
- Cost effective – accurate information for technician service call
- Eliminates extra trips for part sourcing
- Reduces downtime – increases production efficiency
