

micro batch III

Introducing Desna's MicroBatch III

Desna's new **MicroBatch III** is the batching process solution for **small to medium size operations** that do not require in-depth reporting or complete automatic control of the plant. The MicroBatch III features a highly adaptable Programmable Logic Controller (PLC) system that continuously monitors input and controls output based on its individually configured programming. It is fully **adjustable and easily calibrated**, and provides an audit trail with a detailed printout for each batch. The supply system is based on **loss-in-weight scaling and manual loader filling operations**, and the customized control panel is simple and intuitive with a rugged design that will provide many years of reliable service.

- Quick delivery and installation
- Excellent technical support
- Economical and easy to operate
- Detailed manual and training session

AGGREGATE		WATER		CEMENT
